

An actuator enclosure offers additional protection against weather and other elements, beyond what is provided by the actuator housing itself. For operable louvers, Pottorff offers three different types of enclosure for Belimo actuators shipped pre-installed from the factory.

Single-Section Configuration

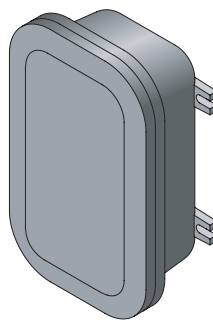

ZS-100

ZS-100 Weather Shield

The ZS-100 is a simple box fabricated from 16-gauge galvanized steel. The ZS-100 is not fully water tight but provides moderate protection for actuators mounted outdoors. Available on louvers at least 19" (483) tall.

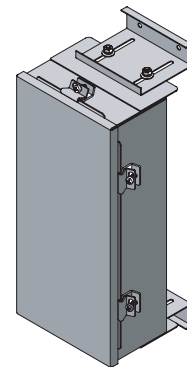

ZS-260

ZS-260 Explosion-Proof Housing

The ZS-260 is a heavy-duty cast aluminum housing designed to provide explosion protection for electric actuators. Available on louvers at least 21-1/2" (546) tall.

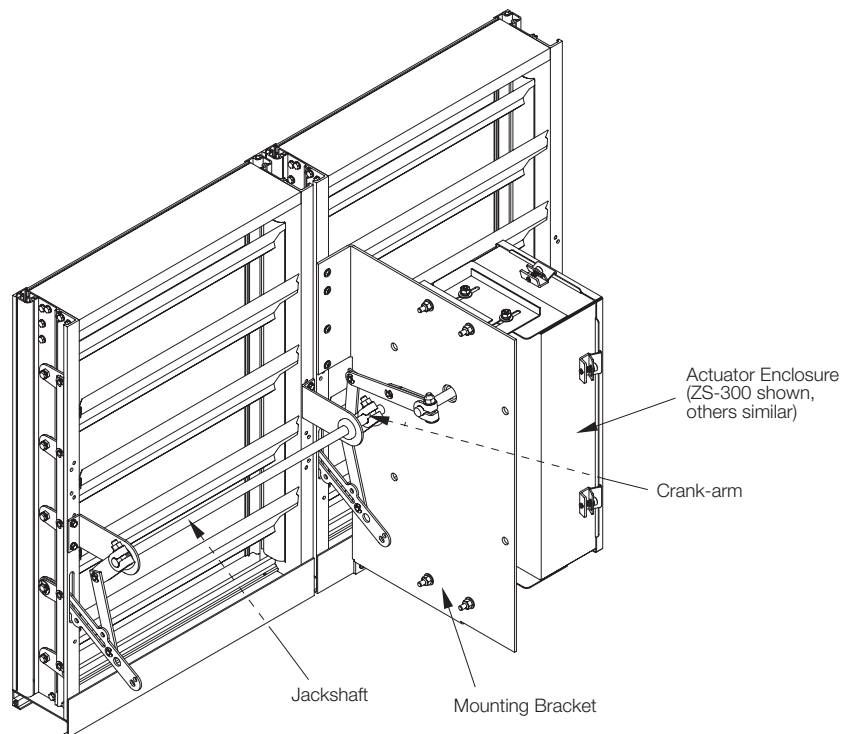

ZS-300

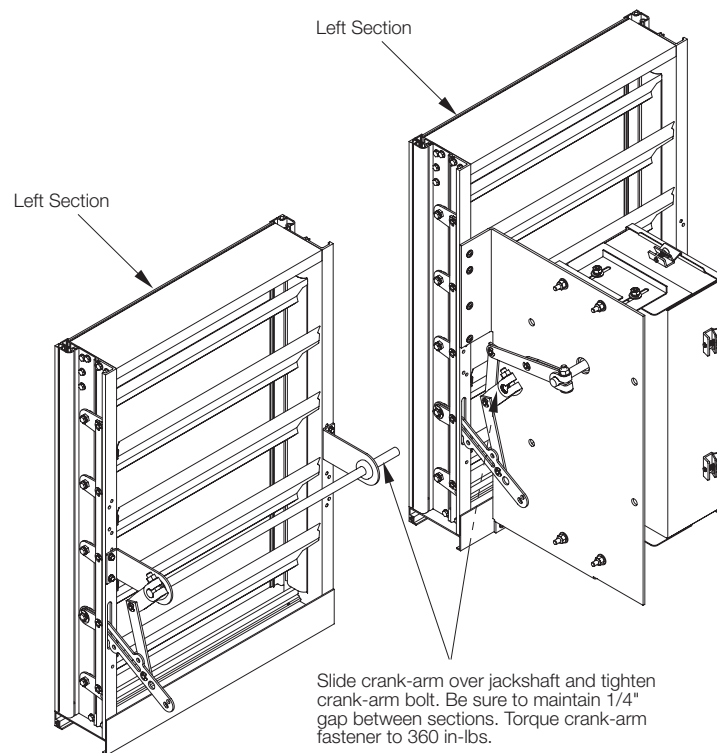

ZS-300 NEMA 4X Housing

Constructed from 304 stainless steel, the ZS-300 enclosure is intended for use as protection against corrosion, windblown dust or rain, and other sources of water exposure. Available on louvers at least 21-1/2" (546) tall.
