

Bird Screen

Bird screens are a popular louver accessory used to prevent birds and other small animals from entering through the spaces between louver blades. Such screens are also effective at keeping trash and other small, lightweight debris from infiltrating the building ventilation system. Although an optional feature, bird screen is included by default on most C & S louver models.

Standard Construction

Material: 5/8" x 0.050" expanded and flattened aluminum

Finish: To match louver finish

Frame fasteners: Stainless steel self-drilling screws, 20" (508) max. on center

Location: Rear (interior) side of louver

Mounting: Standard, non-removable frame

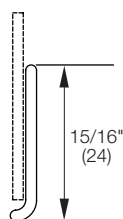

Options

■ Alternate materials:

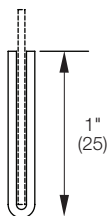

- 3/4" x 0.050" expanded and flattened aluminum
- 3/16" x 0.050" expanded and flattened aluminum
- 1/2" x 0.063" stainless steel wire mesh
- 1/2" x 19-gauge galvanized steel wire mesh

■ Front (exterior) screen location

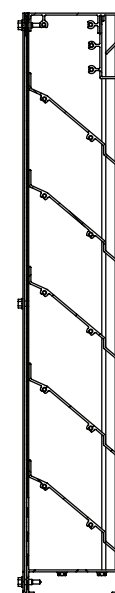

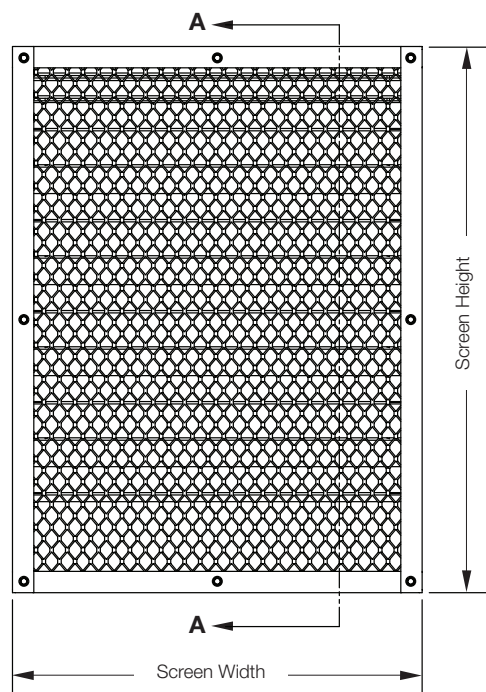

■ Removable screen mounting
